TRUNK LINERS

TAILORED BOOT TRUNKS

With its perfect fitting, trunk liner system represents the simple and practical solution to keep car trunk clean and protected in order to maintain the value of your car.
We use only OEM approved materials following the requested regulations. Our production process allows G3 to adapt its domestic production in order to guarantee capacity, punctuality and quality.
Starting from CAD-Construction, the cooperation with our clients is always motivational and professional also by getting through different OEM-Audits.
We produce trunk liners with different rim heights: from 45 to 450 mm.

BIO BASED

In addition to the classical plastic materials, G3 offers their clients the opportunity to choose a product derived from renewable sources. This innovative material originates from production wastes of the agricultural production, thus contributing to the sustain of the agricultural supply chain and to the recovery of production wastes.

In this way it's possible to obtain a product with the same chemical characteristics of the fossil polyethylene, but, coming from renewable sources, it helps reducing energy waste and CO2 emission during the productive process.

ADHESIVE INSERTS

Possibility to include logos and words inside the trunk liner. Possibility to choose graphic, materials and texture to make each product even more customised.

MATERIAL

FOAM-PE
MATERIAL

Cross-linked foam polyethylene.

HD-PE
MATERIAL

High-Density Polyethylene.

LD-PE
MATERIAL

Low-Density Polyethylene.

FEATURES

QUALITY TESTED

Process management following IATF.

TAILORED

Our trunk liners are realised ad hoc based on CAD-Data with perfect fitment to trunk

ODOR TESTED

Test made to verify the presence of eventual residual odors related to remaining smells derived from material.

WASHABLE

Our trunk liners are realised with waterproof and washable materials resistant to cleaning agents.

EMISSION TESTED

All our products successfully pass the strict emission tests required by current regulations.

THERMAL SHOCK

Trunk liners are produced with a material, which brilliantly pass tests at high and low temperatures (-35°C/+80°C).

CLIMATIC TEST

Very good behaviour under climate stress due to changes in temperature (+80°C/-40°C) and humidity (30-80%).

FLAMMABILITY

All our products pass the tests to prove the non-flammability of the materials.

EASYFIX

Efficient rapid assembly time.
